

**Excerpts from the book
Biological, Chemical, and Nuclear Warfare
The Power of Digital Medicine
By Dr. Savely Yurkovsky**

(pg xvi)

It is well known that placing colloidal particles of silver into a beaker of water that contains bacteria will kill the bacteria. What is not so well known is that placing these colloidal silver particles in a nearby gas discharge tube, and focusing the electromagnetic emission from the tube onto the beaker, will also kill the bacteria. Thus, **physical contact between the bacteria and the silver is not a necessary condition** for killing the bacteria.

(pg 1)

Unlike allopathic or conventional medicine, approaches that are antagonistic or opposite to disease, homeopathy cures use the very substances which, given to a healthy person, are capable of producing the same disease or ailment. In case of a fever, the allopathic approach would indicate suppressing the fever through anti-fever drugs. Homeopathy would administer a remedy that would *produce* fever in a healthy person.

(pg 4)

Once the correct remedy is administered, the body's inherent defenses will be able to receive from the remedy the missing signal that will trigger and properly channel the body's untapped reserves. The recruitment of these reserves will allow the ill person to overcome the pathology and return to health.

(pg 10)

It is not a prerequisite for medicines to contain a material substance in order to promote healing effects.

Such a requirement is necessary only for *pharmaceutical medicines*, whose action is based on the principles of chemistry because they are measured and dispensed in units of weight: grams, milligrams, or even micrograms. The category includes pharmaceutical drugs, herbs, vitamins, nutritional supplements, aromatic oils and others. The effects of these substances on the body depend upon their chemical properties and their concentration within the body.

However, the human body also can be affected by many other factors in Nature that do not represent pharmaceutical or chemical agents, *per se*.

Once the correct remedy is administered, the body's inherent defenses will be able to receive from the remedy the missing signal that will trigger and properly channel the body's untapped reserves.

The recruitment of these reserves will allow the ill person to overcome the pathology and return to health.

Instead these factors represent energetic forces that are capable of acting at the level of our *energy body*. **Homeopathy is a very powerful member of the family of energetic medicines.**

(pg 12)

There is another dimension to everything in Nature, including our environment and our bodies. This dimension – energy – is the deepest and most fundamental of all.

(pg 13)

Modern technologies using spectra-analysis obtained with the Raman-laser, infrared absorbance and nuclear magnetic resonance (NMR) **have all confirmed the difference in emission patterns between homeopathic remedies and a placebo**. In addition, each homeopathic remedy was found to exhibit a unique NMR emission pattern.

(pg 14)

Stanford University Professor Emeritus of Materials Science, William A. Tiller, has explained that homeopathic preparations form two layers that become permanently imprinted into water media: one more superficial, primarily electric, and another, deeper and more subtle, mainly magnetic layer.

(pg 14)

The reason homeopathic remedies are capable of producing therapeutic effects in the sick, is that **humans are the ideal recipients of the energetic properties of homeopathic medicines**. This is attributable largely to the energy fields of our cells that regulate our entire physiology, including our body chemistry.

(pg 15)

After years of research and experimentation, Georges Lakhovsky, a Russian engineer working in France, concluded that health is nothing but a state of electro-magnetic equilibrium of body cells, while diseases and death represent just the opposite – a broken energetic balance.

(pg 18)

Scientists have observed that exposure to toxic substances or stressful emotional stimuli change the cellular energy emission patterns from normal to pathological. Furthermore, **all the major assaults (toxic pollutants, infectious agents, or physical and emotional traumas) that the body is not able to overcome become imprinted onto cellular recordings in a CD-like fashion**, and then continuously feed back into the body's chemistry, altering it adversely. This "cellular memory" could explain the tenacity of chronic diseases and the inability of conventional pharmaceutical methods to eradicate them. Drugs which act through chemistry, the most superficial level of Mans' physiology, simply cannot erase pathological information residing within our cells.

(pg 19)

German physicist Professor Herbert Frohlich and Professor Fritz-Albert Popp established that cells in the body interact through coherent oscillations. In health, these oscillations are robust and precise. They can be likened to miniature radio stations, exchanging clear and synchronized signals.

If one considers that every human cell contains 100,000 genes and chemistry of a single cell is run by about 3,000 enzymes, and that Man's body on a whole contains some 75 trillion cells, with as many as 100,000 chemical reactions taking place in each cell every second, it would be impossible for the body to maintain such enormous biochemical machinery or to adapt it quickly to ongoing stresses by relying on the relatively slow speed of chemical reactions.

Professors Frohlich and Popp have demonstrated that electromagnetic communication between cells constitutes the primary process governing chemical reactions.

(pg 20)

Professor Popp demonstrated that DNA performs its regulatory functions and receives feedback information from chemical reactions via tiny electromagnetic charges - photons.

Furthermore, Soviet researchers found that even after DNA molecules were physically removed from a solution, residual oscillations of these molecules remained present, which they called "phantom DNA".

(pg 21)

In a series of experiments conducted in medical facilities in London and Dallas, Texas, allergic patients displayed exactly the same allergic reactions whether exposed to the actual chemical allergens or to certain electromagnetic frequencies.

(pg 41)

Physics has established that every substance is endowed with its own unique natural (electromagnetic) resonance frequency.

Physics also states that the electromagnetic interactions between elementary, subatomic particles produce fields and forces that govern chemistry and chemical reactions. These interactions are described by quantum electrodynamics, which has established that without stable quantum energetics there would be no chemistry because matter would disintegrate into subatomic chaos.

(pg 42)

Professor Tiller observed that **conventional medicine addresses illness only at the most superficial level**. He sees the first and second levels as energetic, relating to the cause of disease and extent of cellular memory; with the third level, the superficial level, the biochemical abnormalities have resulted from disturbances in the first two levels. In contrast, **homeopathy addresses all three levels of illness**.

The vast body of scientific evidence makes it apparent that the physiology of all living systems is being run via **computer-like electromagnetic communications**.

Furthermore, homeopathic remedies, which contain stored diverse and specific energetic information, may be able to interact with the endogenous energetic communication system in the living and provide stimulating and correcting signals that promote self-repair and healing.

Homeopathy is indeed unique among all therapies in its ability to influence cellular memory.
