

ISIS Vision

v1.00.0024 January 2010

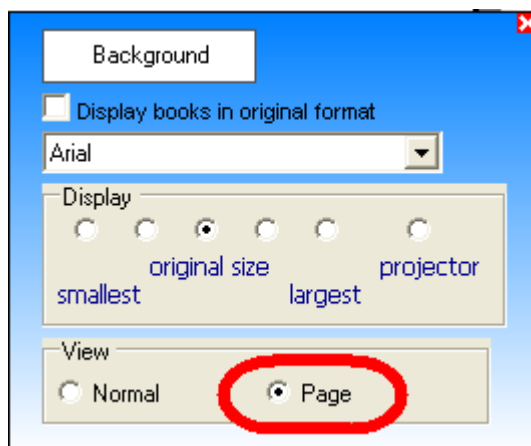

This version contains the following:

1. Enhancements
2. English Language New Books
3. German Language New Books
4. Bug Fixes

Enhancements

1. Improved readability of materia medica.

There is a new a Page option in the MM preferences which displays borders around all pages to aid visibility

If you increase the font size of mm text to aid readability then it may get too large to be displayed. ISIS then displays a scroll bar so you can use your mouse to see all of the text. You can also try to use the divider bars at either side of the text which may help.

As a further aid we have now added a **Full** button displayed at the bottom of the screen whenever materia medica is displayed.

This is intended to make the reading of graphics in the materia medicas much easier. If you have increased the size of the text and it does not fit onto the standard display area then clicking FULL will allow the book text to fill the entire screen. Click the Close button or press the ESC key to return to normal viewing

2. Improved Patient records

- a. Visit/Consultation changes are now saved automatically
- b. If you click the New icon in ISIS with a patient already active then the details are automatically saved and a message displayed:

ISIS has saved all details for your previous patient. Click OK to start work with a new case

- c. If you have entered ISIS via the Patients icon then the Open and Save commands have been disabled. A message is displayed:

As you have a patient active you cannot use this function. Click the Patient icon to save the case and return to patient details. If you wish to stop working with the patient record then click the New icon to begin a new case

d. In a Patients Consultation record you can now type in any Remedy, Potency and Frequency you like. You can continue to use the existing drop down choices. If you type in a new entry ISIS will automatically save it so you can re-use it in the future.

3. Digital Remedy Libraries

Attempting to play a digital rx when the library is not installed will cause ISIS to prompt for automatic downloading from www.miccant.com

4. Changing Repertory Book and Chapter easily

Repertory

To quickly change the repertory using the keyboard press the ALT + R keys together. Type in a letter or 2 to identify the desired repertory (or use the up and down arrows) and press the ENTER key. ISIS will change repertory for you

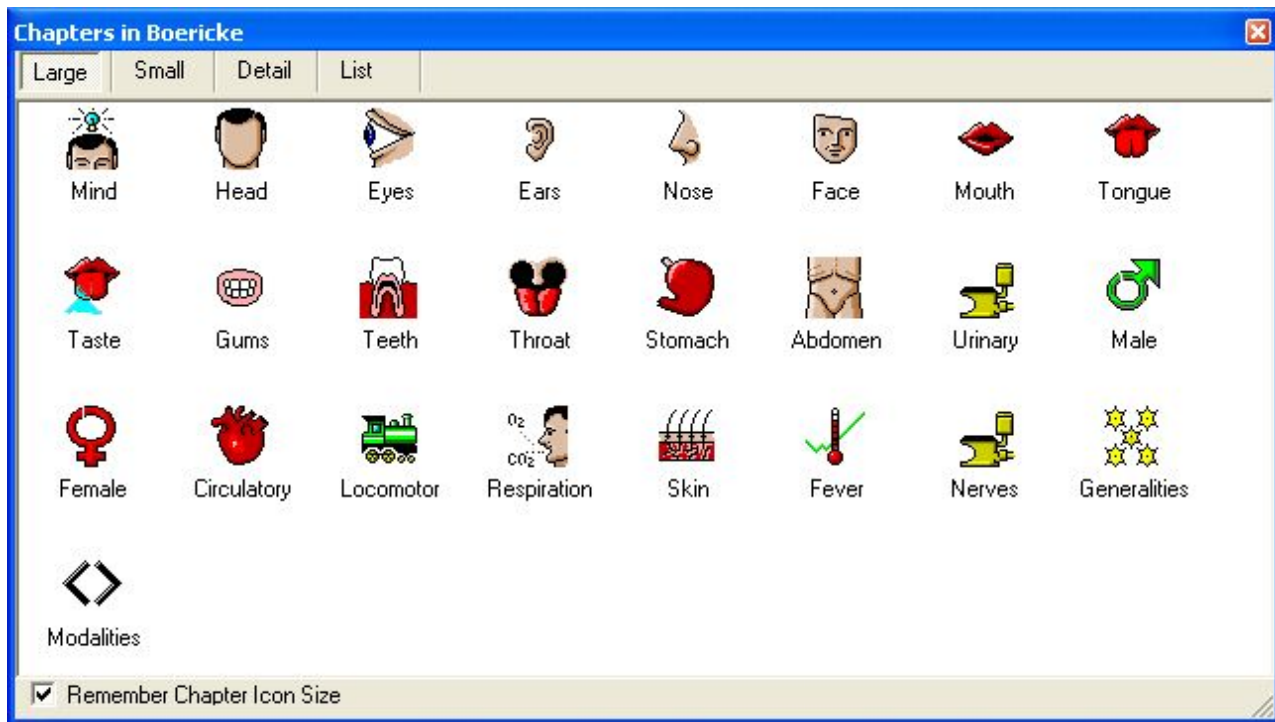

Chapter

To quickly change chapter using the keyboard press keys ALT + C together or the F2 key. A graphical display of all chapters in the current repertory will be displayed. You can then use the mouse or keyboard (by typing in a letter or two) to jump to a new chapter.

Note:

This screen can be re-sized by you by dragging any corner to your desired size. Whatever size you change it to will be remembered by ISIS the next time you use this facility.

You may also change the size of the icons to suit your display tastes

5. Clipboard

On any Clipboard you can now use a quick 'Clear all clipboards' function which deletes all rubrics from all clipboards with no questions asked. Edit menu Delete rubrics from all clipboards and keystroke CTRL + D will effect this option

6. Repertory Search

After a search of all Repertories with 'All Results' chosen, if you now click on a Repertory name in the 'repertory tree' on the left side of the screen, the rubrics will be filtered and reduced to display **only rubrics from that repertory** (previously you had to click on a chapter to do this)

7. Hierarchic repertory view

As several repertories have rubrics that are not in strict alphabetical order you can now press the / key (# for German language users) to jump down the rubrics.

As an example if you are in the Mind chapter and type in F ISIS will jump to the first rubric beginning with the letter F. Now you can press the / key and ISIS will jump to the next rubric beginning with the letter F.

In fact you can type whatever letters you like to position within the chapter and then press / to jump down.

8. Miccant Control Centre

A new checkbox option has been added to the Miccant Control Centre (on by default) that makes the MCC close itself when you clicks Start ISIS (rather than staying on the background)

9. Kingdoms

The Kingdoms classification has been improved throughout to show Bacteria, Viruses and Fungi as separate kingdoms. All associated rx have been correctly classified. All Lanthanide rx have been added.

English Language Optional New Books

This new version now supports the use of these fine books:

1. Scholten Pack 2 – containing the Lanthanides, Wadstories 1 and Wadstories 2
2. Vermeulen Pack 2 – containing Monera (Bacteria & Viruses) and Fungi
3. Kulkarni Pack – Select Materia Medica, Posology, Kalis and Similiars
4. Sankaran Sensation Pack 2 – containing Insights vol 1 and Insights vol 2, Sensations and Schema

Please contact your Miccant representative for prices and to order

German Language New Books

1. Remedy Relationships are now all in the German language
2. Complete Repertory German Full 2009 and Complete Repertory German Classic 2009 are both released

Other works are supported by v1.0024 but are not yet released. They are:-

- a. Stapf Archiv
- b. Bonninghausen Pack (orig Taschenbuch with Polarities and Hauptwirkungen MM)
- c. Additional modern materia medicas

Bugs Corrected

1. Various items fixed.
2. Murphy's Rep edtn 3 has been thoroughly revised with all reported display errors removed
