

ISIS Vision

v1.00.0026 April 2011

This release contains several minor improvements and also resolves all issues reported to us since the release of v1.0025 in April 2010

Enhancements

Bird remedies have been re-classified within ISIS. Now when repertorising, comparing remedies or looking at the families within rubrics all the members of the Bird family will be included

If you add your own rubrics into a repertory and you work using the Hierarchic view of the repertory ISIS will now immediately display your additions and changes (previously you had to stop and re-start ISIS)

When you remove a rubric from a clipboard the red tick will now be immediately removed from the main repertory display screen.

The very last cross reference displayed for a rubric in Complete Repertory was previously slightly obscured. We have improved this to ensure all cross references are fully readable on screen.

To help those using web based email we have improved the Dongle Code updater software (RVD) so that it processes web based email codes more easily.

The Remote Support facility has been changed and improved.

More provings (English language)

A 7th volume of provings has been released to add to the resources in your ISIS. These are freely provided to all ISIS Vision users.

The new provings contain:

Balsam Fir, Great Wall of China, Condor, Helix Tosta (Snail), Jupiter, Kgaba (Pitocine), Prickly Ash, Uranium, Wollemia nobilis

And each contains the text and any images in full exactly as the author supplied them

Complete Repertory 2011 editions

The 2011 editions of the Complete Repertory are supported by v1.0026. Both Full and Classic editions are available in both English & German (Classic does not contain any remedy or rubric additions since 1936)

Enhancements made this year include:

- About 15,000 additions from contemporary Homeopathic Magazines like Homeopathic Links, Zeitschrift für Klassische Homöopathie, Homöopathie Konkret, Homöopathie Zeitschrift and hundreds of additions from internet magazines like Interhomeopathy.

- New remedies added into the Full edition of CR2011 repertory:

Arecin-br (Arecolinum hydrobromatum)
Caesal-s (Sappanwood)

Carli-g (Atractylis gummifer Thistle)
Coffin-cit (Caffeine)
Dab-r (Russell's viper)
Dermat-p (House dust mite)
Dinitrob (Nitrobenzene)
Esin-s (Esirinum supluricum)
Lac-l-g (Llama's Milk)
Leuc-c (Kgaba, African Pitocine)
Leyc-f (Himalayan Honeysuckle)
Nat-glt (Monosodium glutamate MSG)
Trachy-a (Caraway seeds)

- Nearly 300,000 additions from John Henry Clarke's *Clinical Materia Medica* of mainly the smaller remedies out of Volume 1, start of 2 and 3 (an ongoing process of upgrading that will continue in the next versions of the *Complete Repertory*).

To purchase Complete Repertory or to upgrade your current edition of the Complete please contact your Miccant agent for pricing.

Items Resolved

Several reported items have been resolved in this release. All were minor issues that most users will have not been aware of.

Of more special note are these items that have been resolved:

Murphy's Repertory – yet more typographical and truncation errors in the source materials have been identified rectified (these affected the General, Head and Mind chapters)

Complete Repertory 2010 – the Fever & Perspiration chapters are now correctly displayed in the repertory 'tree' on the left side of the screen.
